Results of the research
EPRALIMA

SocEnter

In the framework of the Erasmus+ project SocEnter: Development of social entrepreneurship - new opportunities and ways of development, our school has carried out a survey aimed at adults and at people who work with adults, regardless of whether or not they are familiar with vertical companies.

Methodology

For the methodology of the survey, it was decided to conduct qualitative research using a google form questionnaire distributed to adults, teachers, social entrepreneurs and people working with adults. The research sample consisted of 44 respondents.

Main results

In general, we can see that a large part of the respondents who participated in this survey consider important that the social entrepreneur is a person who attempts to solve the problems of the community for the common good of all and that can be combined with profit for the entrepreneur. However, since social entrepreneurship is combined with technological advantages, there should be adequate and continuous training for people involved in this sector, being the best way to keep up with the trends of the time.
